

ULTRA-FLEX®

I. C. O.

INSIDE CURVES ONLY

Ultra-Flex® I. C. O. was designed specifically for trimming inside curves that are too tight for standard Ultra-Flex®. When trimming inside curves which have a smaller radius than 6', we recommended I. C. O. It installs easily and creates a smooth, clean architectural appearance with no pleating or distortion of the vinyl covering. It is identical to our standard Ultra-Flex® angles with the exception that it comes already curved to a 16" radius. It can be installed in any inside curve with a radius of 16" or greater. I. C. O. is available in all standard angle sizes.
